CONSENT FOR UNCOVERING, BONDING, & BRACKETING TEETH FOR ORTHODONTIC CARE

If you have any questions, please ask your doctor BEFORE signing this consent form.

You have the right to be informed about your diagnosis and planned surgery so that you may make an informed decision as to whether to undergo a procedure after knowing the risks and benefits.

Procedure to be performed:

It has been explained to me that certain risks and complications are associated with my surgery, which include (but are not limited to):

1. Swelling, soreness, bruising, stiffness, of jaw muscles and jaw joints (TMJ), unexpected drug reactions or allergies, and fracture of the jaw or portions of bone supporting teeth, and difficulty eating for a number of days.

2. Because of the exposure required to gain access to certain teeth buried beneath the gum, areas around the uncovering may feel numb for days, weeks, or months after surgery. In rare cases this feeling may be permanent.

3. Certain teeth to be uncovered often are very close to roots of adjacent teeth. There is a slight chance that those roots may be injured, requiring later root canal treatment or, in rare instances, may result in the loss of those teeth.

4. Although usually only one incision is needed to expose the buried tooth, sometimes the approach is complicated enough to require two or more incisions.

5. When uncovering upper back teeth, there is a chance that the sinus may be entered, requiring antibiotic therapy, or possibly resulting in an opening between mouth and sinus that may require further care. Rarely, the same complication may affect the nasal cavity.

6. Often an orthodontic bracket and/or a wire or fine chain is attached to the uncovered tooth; then to your orthodontic appliances to gain the force to try to move the tooth. This may cause irritation to your tongue and interfere somewhat with eating. You will usually adjust to this problem fairly quickly. Occasionally the bracket will become detached and must be re-attached. We will re-attach the bracket at no-charge for the first 6 months anything over 6 months will be another charge.

7. Although it cannot be easily determined beforehand, sometimes the planned orthodontic movement of the uncovered tooth cannot be accomplished. If so, the tooth may be left in place or, if conditions require, be removed.

ANESTHESIA

The anesthetic I have chosen for my surgery is:

- Local Anesthesia ("Novocaine")
- Local Anesthesia with Nitrous Oxide/ Oxygen Analgesia ("Laughing Gas")
- Local Anesthesia with Oral Sedation (Children)
- Local Anesthesia with IV Sedation
ANESTHETIC RISKS:
Discomfort, swelling, bruising, infection, and allergic reactions. There may be inflammation at the site of an intravenous injection (phlebitis) which may cause prolonged discomfort and/or disability and may require special care. Nausea and vomiting, although rare, may be unfortunate side effects of IV anesthesia. Intravenous anesthesia is a serious medical procedure and, although considered safe, carries with it the risk of heart irregularities, heart attack, stroke, brain damage, or death.

IF IV ANESTHESIA IS USED YOUR OBLIGATIONS ARE AS FOLLOWS:
A. Because anesthetic medications cause prolonged drowsiness, you MUST be accompanied by a responsible adult to drive you home and stay with you until you are sufficiently recovered to care for yourself.
B. During recovery time (24 hours) you should not drive, operate complicated machinery or devices, or make important decisions such as signing documents, etc.
C. You must have a completely empty stomach. **IT IS VITAL THAT YOU HAVE NOTHING TO EAT OR DRINK FOR SIX (6) HOURS PRIOR TO YOUR ANESTHETIC. TO DO OTHERWISE MAY BE LIFE-THREATENING!**
D. However, it is important that you take any regular medications (high blood pressure, antibiotics, etc.) or any medications provided by this office, **using only a sip of water.**

No guaranteed or warranted results have been offered or promised. I realize my doctor may discover conditions which may require different surgery from that which was planned and I give my permission for those other procedures that are advisable in the exercise of professional judgment to complete my surgery.

CONSENT

I have had an opportunity to have all my questions answered by my doctor and I certify that I speak, read, and write English. My signature below signifies that I understand the surgery and anesthetic that is proposed for me, together with the known risks and complications associated. I hereby give my consent for such surgery and the anesthesia I have chosen.
